EDUCATION

Western University

London, Ontario

Candidate for Bachelor of Engineering Science, Software Engineering (BESc) - Dean's Honor List Class of 2026

WORK EXPERIENCE

Bell Canada — Junior Data Analyst

June 2024 – December 2024

- Gained hands-on experience resolving client tickets by leveraging SQL to query complex databases, extract and analyze large datasets, and compile actionable reports tailored to meet specific client requirements.
- Documented the learning process from onboarding to proficiency, creating comprehensive guides and best practices to accelerate the onboarding process for future hires, enhancing their ability to contribute effectively.
- Transitioned to a new team mid-internship, quickly adapting to project requirements and contributing to key deliverables, demonstrating flexibility and the ability to drive progress in complex projects.
- Played a pivotal role in stakeholder meetings and cross-functional collaborations, ensuring project alignment, addressing roadblocks, and maintaining transparent communication across teams.

Western University — Frontend Developer

May 2024 – August 2024

- Collaborated within a team to develop a website for an Italian exhibition, contributing to the design and implementation of key sections using HTML, CSS, JavaScript, and Bootstrap to ensure an engaging interface.
- Leveraged GitHub for version control and team collaboration, gaining hands-on experience in coordinating tasks, resolving merge conflicts, and maintaining an efficient workflow across a shared project.

PROJECTS

Green Certification Navigator — Full-Stack Developer

Fall 2025 - Winter 2026

RBC Sponsored Industry Project

- Collaborated in a Scrum-based team of 5, participating in sprint planning, refinement, and iterative delivery of a chat-based AI advisor for building owners to converse with to assess and obtain green building certification.
- Developed React + Vite frontend components for conversational workflows and certification insight displays, paired with a Node.js/Express backend to orchestrate AI-powered analysis pipelines.
- Integrated AI APIs to interpret and reason user queries, evaluate certification criteria, and generate contextual sustainability recommendations.
- Implemented PostgreSQL hosted on Google Cloud to enable synchronized data access, alongside GitHub-based collaboration for coordinated development across the team.
- Worked with an RBC industry stakeholder through bi-weekly sprint reviews to validate requirements and align deliverables with enterprise sustainability goals.

AI Wedding Planner — Full-Stack Engineer

Winter 2026

Academic Project

- Developed a full-stack AI web application using Python Flask and Gemini API, implementing a RAG pipeline to generate personalized wedding plans based on user inputs (budget, guest count, preferences).
- Integrated OpenWeatherMap API to enrich outdoor event conflict detection with real-time forecast data, and SendGrid to deliver dynamically templated HTML planning reports via email.
- Built a follow-up Q&A chat endpoint in Flask, enabling real-time, multi-turn refinement of wedding plans.
- Implemented retry logic with exponential backoff for Gemini API calls, improving reliability under high demand.
- Designed and implemented a responsive SaaS-style frontend (HTML/CSS/JS) featuring a sticky header, skeleton loaders, animated output panel, and a donut chart for real-time budget visualization.

SKILLS

- **Languages:** JavaScript, Java, Python, HTML, CSS, SQL
- **Frameworks:** React, Node.js, Express
- **Cloud/DevOps:** Docker, Kubernetes (GKE), CI/CD (Cloud Build), AWS, Google Cloud Platform
- **Databases:** PostgreSQL, Firebase, SQL Server
- **Tools:** GitHub, VS Code, IntelliJ IDEA, Claude Code, ChatGPT, Gemini, Copilot
