SUMMARY

Software Engineering graduate with professional experience in full-stack web development, cloud technologies, and AI-powered applications through industry internships and academic projects. Proficient in React, Node.js, Python, SQL, and Google Cloud, with experience building scalable software in Agile environments. Passionate about solving complex problems and developing high-quality software that delivers meaningful user impact.

EDUCATION

Western University

Bachelor of Engineering Science, Software Engineering

• **Achievements:** Dean's Honour List

2022 - 2026

London, Ontario

WORK EXPERIENCE

Bell Canada | *Junior Data Analyst*

June 2024 - December 2024

- Refactored legacy data processing code by improving code structure, readability, and maintainability, optimizing execution efficiency and reducing program runtime by 20–30%.
- Resolved 20+ client tickets by leveraging SQL in SQL Server to query complex databases, extract and analyze large datasets, and compile actionable reports, reducing ticket resolution time and improving client satisfaction.
- Presented client solutions, technical findings, and project documentation to directors and senior managers through periodic demos, effectively communicating project impact and supporting continued project involvement.
- Participated in stakeholder meetings and cross-functional collaborations, aligned project goals and resolved roadblocks, which kept the project on schedule and improved team communication.
- Documented the onboarding learning process and created 20+ pages of comprehensive guides in Confluence, shortening onboarding time for new hires and enabling them to contribute more quickly

Western University | *Frontend Developer*

May 2024 - August 2024

- Collaborated with a team to develop a website for an Italian exhibition, designing and implementing key sections using HTML, CSS, JavaScript, and Bootstrap to deliver an engaging user interface.
- Leveraged GitHub for version control and team collaboration, coordinating tasks, resolving merge conflicts, and maintaining an efficient workflow to keep development on schedule and reduce integration delays.
- Translated exhibition requirements and design specifications into functional web interfaces, ensuring accurate content presentation and alignment with stakeholder expectations.

PROJECTS

Green Certification Navigator | *RBC Sponsored Industry Project*

September 2025 - April 2026

- Collaborated in a Scrum-based team of 5, participating in sprint planning, refinement, and iterative delivery of a chat-based AI advisor for building owners to converse with to assess and obtain green building certification.
- Developed React + Vite frontend components for conversational workflows and certification insight displays, paired with a Node.js/Express backend to orchestrate AI-powered analysis pipelines.
- Integrated AI APIs to interpret and reason user queries, evaluate certification criteria, and generate contextual sustainability recommendations.
- Implemented PostgreSQL hosted on Google Cloud to enable synchronized data access, alongside GitHub-based collaboration for coordinated development across the team.
- Worked with an RBC industry stakeholder through bi-weekly sprint reviews to validate requirements and align deliverables with enterprise sustainability goals.

AI Wedding Planner | *Academic Project*

January 2026 - April 2026

- Developed a full-stack AI web application using Python Flask and Gemini API, implementing a RAG pipeline to generate personalized wedding plans based on user inputs (budget, guest count, preferences).
- Integrated OpenWeatherMap API to enrich outdoor event conflict detection with real-time forecast data, and SendGrid to deliver dynamically templated HTML planning reports via email.
- Built a follow-up Q&A chat endpoint in Flask, enabling real-time, multi-turn refinement of wedding plans.
- Implemented retry logic with exponential backoff for Gemini API calls, improving reliability under high demand.
- Designed and implemented a responsive SaaS-style frontend (HTML/CSS/JS) featuring a sticky header, skeleton loaders, animated output panel, and a donut chart for real-time budget visualization.

SKILLS

Languages & Frameworks: JavaScript, Java, Python, HTML, CSS, SQL, React, Node.js, Express

Cloud & Databases: AWS, Google Cloud Platform, PostgreSQL, Firebase, SQL Server

Tools: Claude Code, Chat GPT, GitHub, VS Code, IntelliJ IDEA, Unity, Blender
